Poland - Your Health Destination

Discover Polish Medical Facilities & Services

There is no doubt, that the market of medical tourism in Poland has great potential and is growing very fast (+39% yearly according to the Grail Research analysis).

That's why Ministry of Economy has identified the medical tourism as one of the fifteen a high export potential sector in Poland and started with the EU funded programme promoting Polish medical tourism.

Most medical tourists in Poland come from Germany, Scandinavia, Russia, Great Britain and the USA. The most popular service are: dental services, plastic surgery, neuro- and cardiosurgical as well as orthopaedic treatments. Patients enjoy visiting Polish wellness, spa and health-resorts too, since they are famous for their unique climate and great treatment results.

A growing interest among foreign patients in the Polish medicine stems from easy access to the world class specialists, high quality services, modern equipment, latest treatment methods and individual patient care. Last but not least prices for treatment in Poland are reasonable, some procedures even 80 percent cheaper compared to the other European Countries or US. Moreover Poland is situated in the heart of Europe which gives excellent direct flights connection to the rest part of the world. Great tourist attractions make patients stay longer after the medical care or they visit Poland again for holidays.

There is above 500 000 foreign patients yearly in Poland!

Poland has a chance to become an important player on the global market. The Polish Government promotional campaign will surely contribute to increasing the number of medical tourists in Poland.

See WHY patients are coming to Poland & enjoy reading the catalogue which includes 22 Polish Facilities who joined the Program of Medical Tourism Promotion.

Western Hospital of John Paul II

SZPITAL ZACHODNI

im. Jana Pawła II
w Grodzisku Mazowieckim

The John Paul's II Western Hospital in Grodzisk Mazowiecki has been established in 2003. Our top priority is to provide the highest quality medical services. Since the very beginning this had been guaranteed by state of the art equipment and one of the most highly educated and experienced medical staff in Poland.

Our patients are treated in the following departments: neurosurgery, general surgery, orthopaedics and trauma, paediatrics, neurology, apoplexy, urology, internal ailments, cardiology, oncologic surgery, interventional cardiology, and also in out-patient specialist clinics.

We have one of the most modern operating theatre blocks which fulfill the highest international hygiene and technical requirements. Operating theatres allow performance of a full range of surgical, neurological, orthopaedic, gynaecological and oncologic operations. We also provide a wide range of laparoscopy procedures: gallbladder removal, appendix removal, operations of abdominal rupture, liver (cyst, tumors), peritoneal adhesions, intestines resection. Within neurosurgery treatment we perform operations with small invasive methods according to highest international standards.

The Department of Hemodynamics - Invasive Cardiology is equipped with the latest generation digital apparatus allowing us to perform angiography examination. We can apply interventional cardiology procedures such as: implantation of stents to coronary arteries, coronary angiography, coronary angioplasty ("balloon"), to patients with coronary artery diseases, acute coronary syndromes, heart defects. We perform 60 coronary angioplasty procedures per month. We also conduct percutaneous treatment of arrhythmia ablation and operations of implanting pacemakers. The department has specialists - cardiologists and internists. Nursing team consists of highly trained nurses with extensive experience in invasive cardiology and cardiac intensive care.

All hospital departments are equipped for the professional treatment of patients. Patients are placed in 1, 2 and 3 person rooms with their own sanitary facilities. We also think about our patient's family, which is why the hospital has special guest rooms where members of the family can stay and rest accompanying their relatives without an additional necessity of travel looking for a lodging. Our whole infrastructure is designed for our patient's individual needs. We want to make sure that during their time in our hospital they will be comfortable.

In addition to that we have the department of diagnostic imaging which carries out a full range of specialist diagnoses including: x-ray examination, ultrasonography – USG, magnetic resonance imaging – MRI, mammography.

Rehabilitation centre provides the rehabilitation of ambulatory patients with disorders of the locomotor system caused by orthopedic, neurological and rheumatic diseases. For each patient a high-qualified specialist team creates an individual rehabilitation program in which their state of health is considered.

To fulfill our patients' expectations we are continuously increasing our knowledge, improving our techniques, upgrading and expanding our medical facilities and services. We are focusing our efforts to provide modern healthcare to our patients. Treatments performed in our hospital are comparable with those available in the rest of Europe and the United States but with lower prices.
